I used the email address found in the Discord conversation and entered it into Gravatar's Email Checker. This was based on the clue that the OSINT tool started with the letter "G."

The email checker confirmed that the address was connected to a Gravatar account. It returned the avatar, profile URL, email hash, and avatar URL, which gave me a direct path to the public profile.

I opened the Gravatar profile and found a suspicious Base64-looking string in the profile description. The message also hinted that the correct answer was hidden there, so I copied the encoded text for further analysis.

I pasted the encoded string into a Base64 decoder. After decoding it, the hidden TryHackMe flag was revealed:

```
THM{S3arch_Pr0f1l3s_H4s_3ts_1d3nt1t13s}
```

The screenshot shows the website <https://www.base64decode.org>. The page has a green header with the title "BASE64" and buttons for "Decode" and "Encode". Below the header, there is a language selector showing "English" as the selected language. A message states: "Do you have to deal with Base64 format? Then this site is perfect for you! Use our super handy online tool to encode or decode your data." The main section is titled "Decode from Base64 format" and includes the instruction: "Simply enter your data then push the decode button." A large text input area contains the encoded string: "VEhNe1MzY3JlVF9QcjBmaVwzX0g0c19iMzNuX0lkZW50MWZpM2R9". Below the input area, there is a note: "For encoded binaries (like images, documents, etc.) use the file upload form a little further down on this page." There are three checkboxes: "Source character set" (set to "UTF-8"), "Decode each line separately (useful for when you have multiple entries)", and "Live mode OFF" (which is checked). A green button labeled "DECODE" is present. At the bottom, a text area displays the decoded result: "THM{S3creT_Pr0fil3_H4s_b33n_Ident1fi3d}".

Do you have to deal with Base64 format? Then this site is perfect for you! Use our super handy online tool to encode or decode your data.

Decode from Base64 format

Simply enter your data then push the decode button.

VEhNe1MzY3JlVF9QcjBmaVwzX0g0c19iMzNuX0lkZW50MWZpM2R9

For encoded binaries (like images, documents, etc.) use the file upload form a little further down on this page.

UTF-8 Source character set.

☐ Decode each line separately (useful for when you have multiple entries).

☒ Live mode OFF Decodes in real-time as you type or paste (supports only the UTF-8 character set).

< DECODE > Decodes your data into the area below.

THM{S3creT_Pr0fil3_H4s_b33n_Ident1fi3d}
